1. Write a C++ program that uses a single cin statement to read three integers and uses cout to display them.
2. Write a C++ program that displays your **name**, **branch**, and **college name** on **separate lines** using endl.
3. Write a C++ program that uses **cin** to read a **single-word name** and prints a **welcome message** using cout.
4. Write a C++ program that reads an **integer**, a **float**, and a **character** from the user and displays them properly.
5. Write a C++ program to read a **student name** and display **"Welcome <name>"** using cin and cout.

6. Write a C++ program that reads an account balance and withdrawal amount.

- If the withdrawal amount is less than or equal to the balance, print **"Transaction Successful"**.
- Otherwise, print **"Insufficient Balance"**.

7. Write a C++ program that reads electricity units consumed and displays:

- **Low Usage** (≤100 units)
- **Medium Usage** (101–300 units)
- **High Usage** (>300 units)

8. Write a C++ program that reads student marks and prints:

- **Distinction** (≥75)
- **First Class** (60–74)
- **Second Class** (50–59)
- **Fail** (<50)

9. Write a C++ program that allows the user **three attempts** to enter the correct PIN. Use a while loop and display **"Access Granted"** or **"Access Blocked"**.

10. Write a C++ program to check whether a person is eligible to vote using a *nested if statement*. First check the person's nationality. If the person is an Indian citizen, then check whether the age is 18 or above and display the voting eligibility.

11. Write a C++ program to display a **countdown from a given number to 1** using a while loop.
